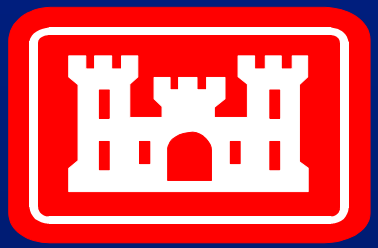
Donaldsonville, LA to the Gulf of Mexico
Feasibility Study



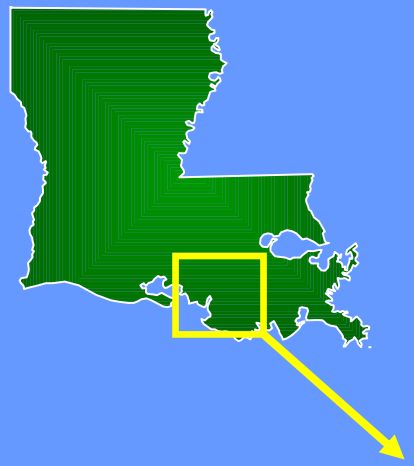
US Army Corps of Engineers®
New Orleans District

Donaldsonville, LA to the Gulf of Mexico

Study Sponsors

Lafourche Basin Levee District
and the
Louisiana Department of Transportation and Development

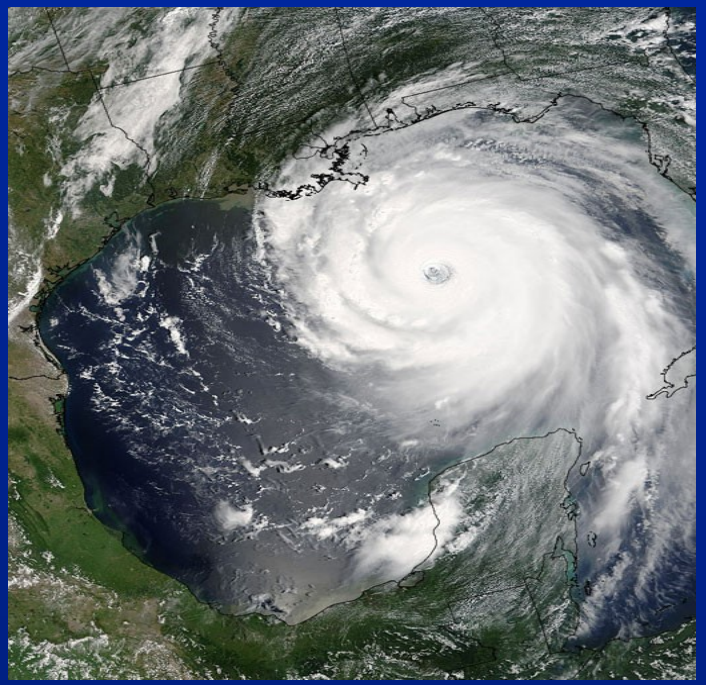
Donaldsonville, Louisiana to the Gulf of Mexico



Corps of Engineers
New Orleans District

Study Objectives

- Hurricane Protection
- Interior Drainage
- Eco-system Restoration



Donaldsonville, LA to the Gulf of Mexico

Donaldsonville, LA to the Gulf of Mexico
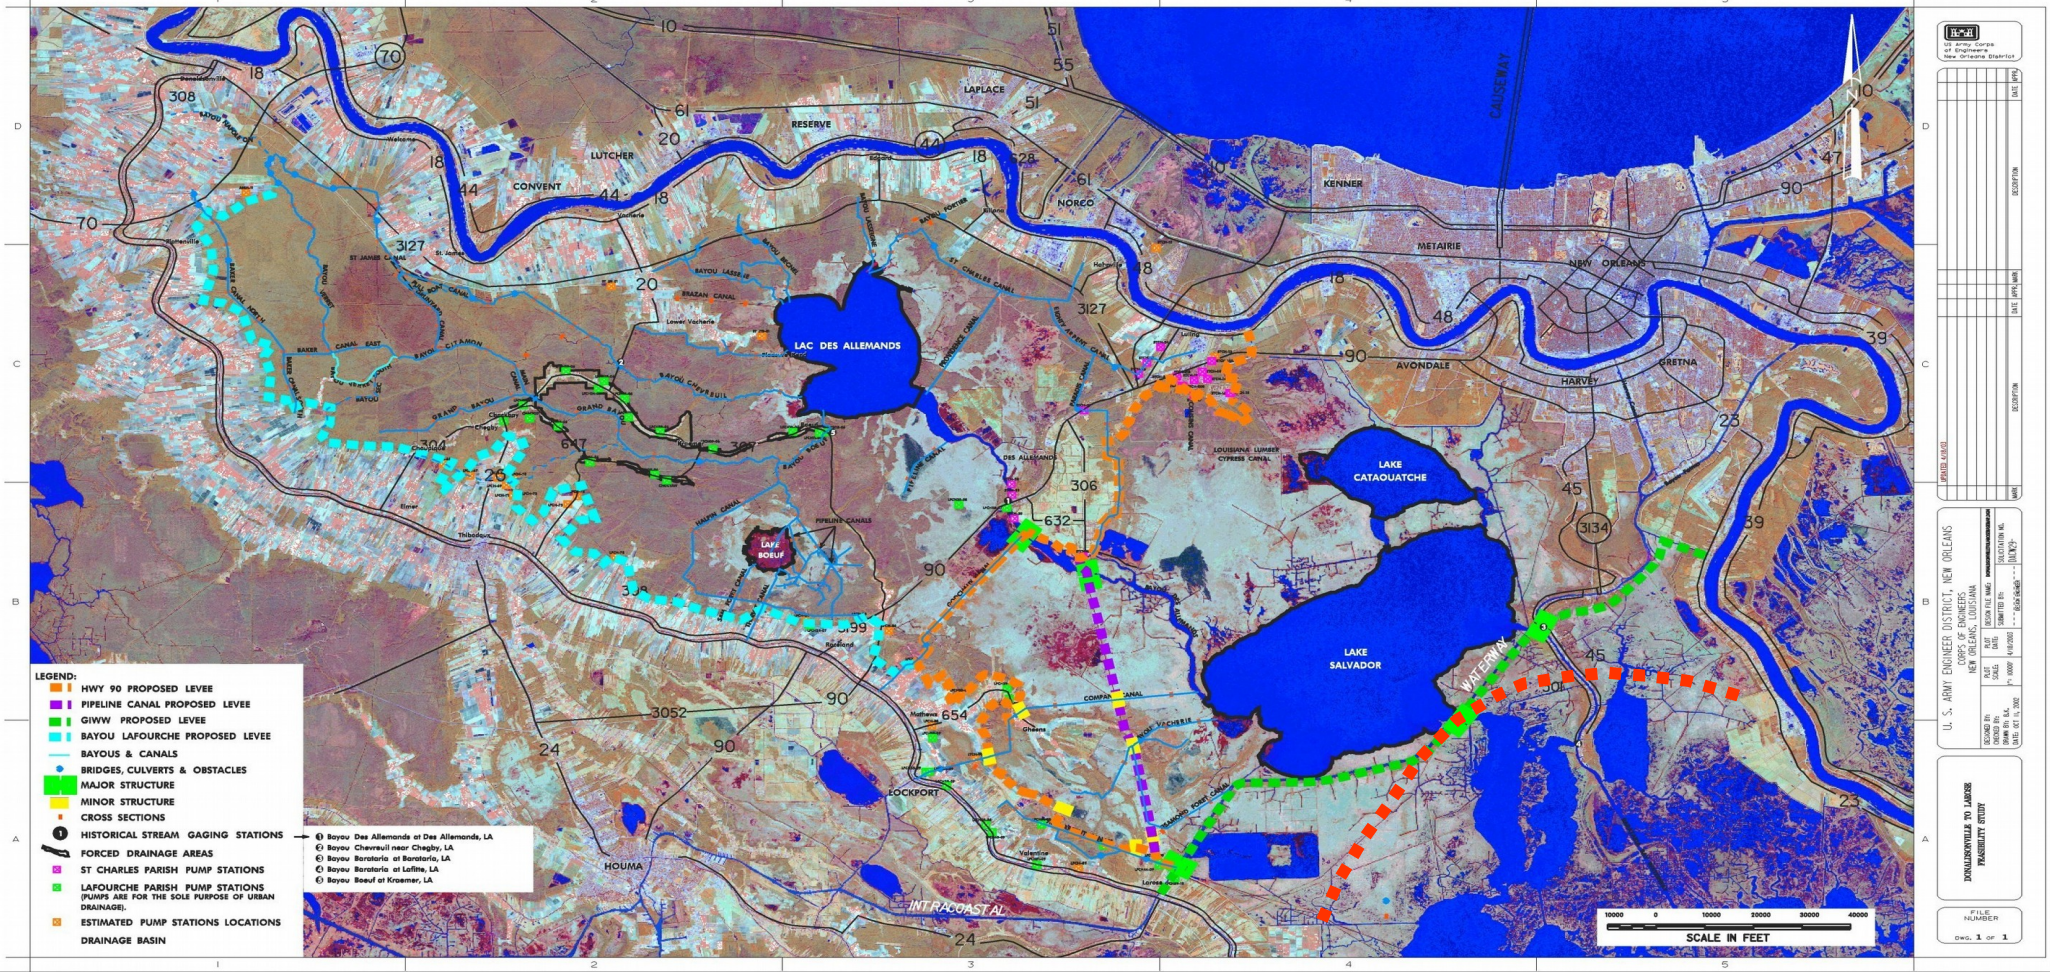
Hurricane Levee Alignments



Donaldsonville, LA to the Gulf of Mexico

Gulf Intracoastal Waterway (GIWW) Levee Alignment

Advantages:

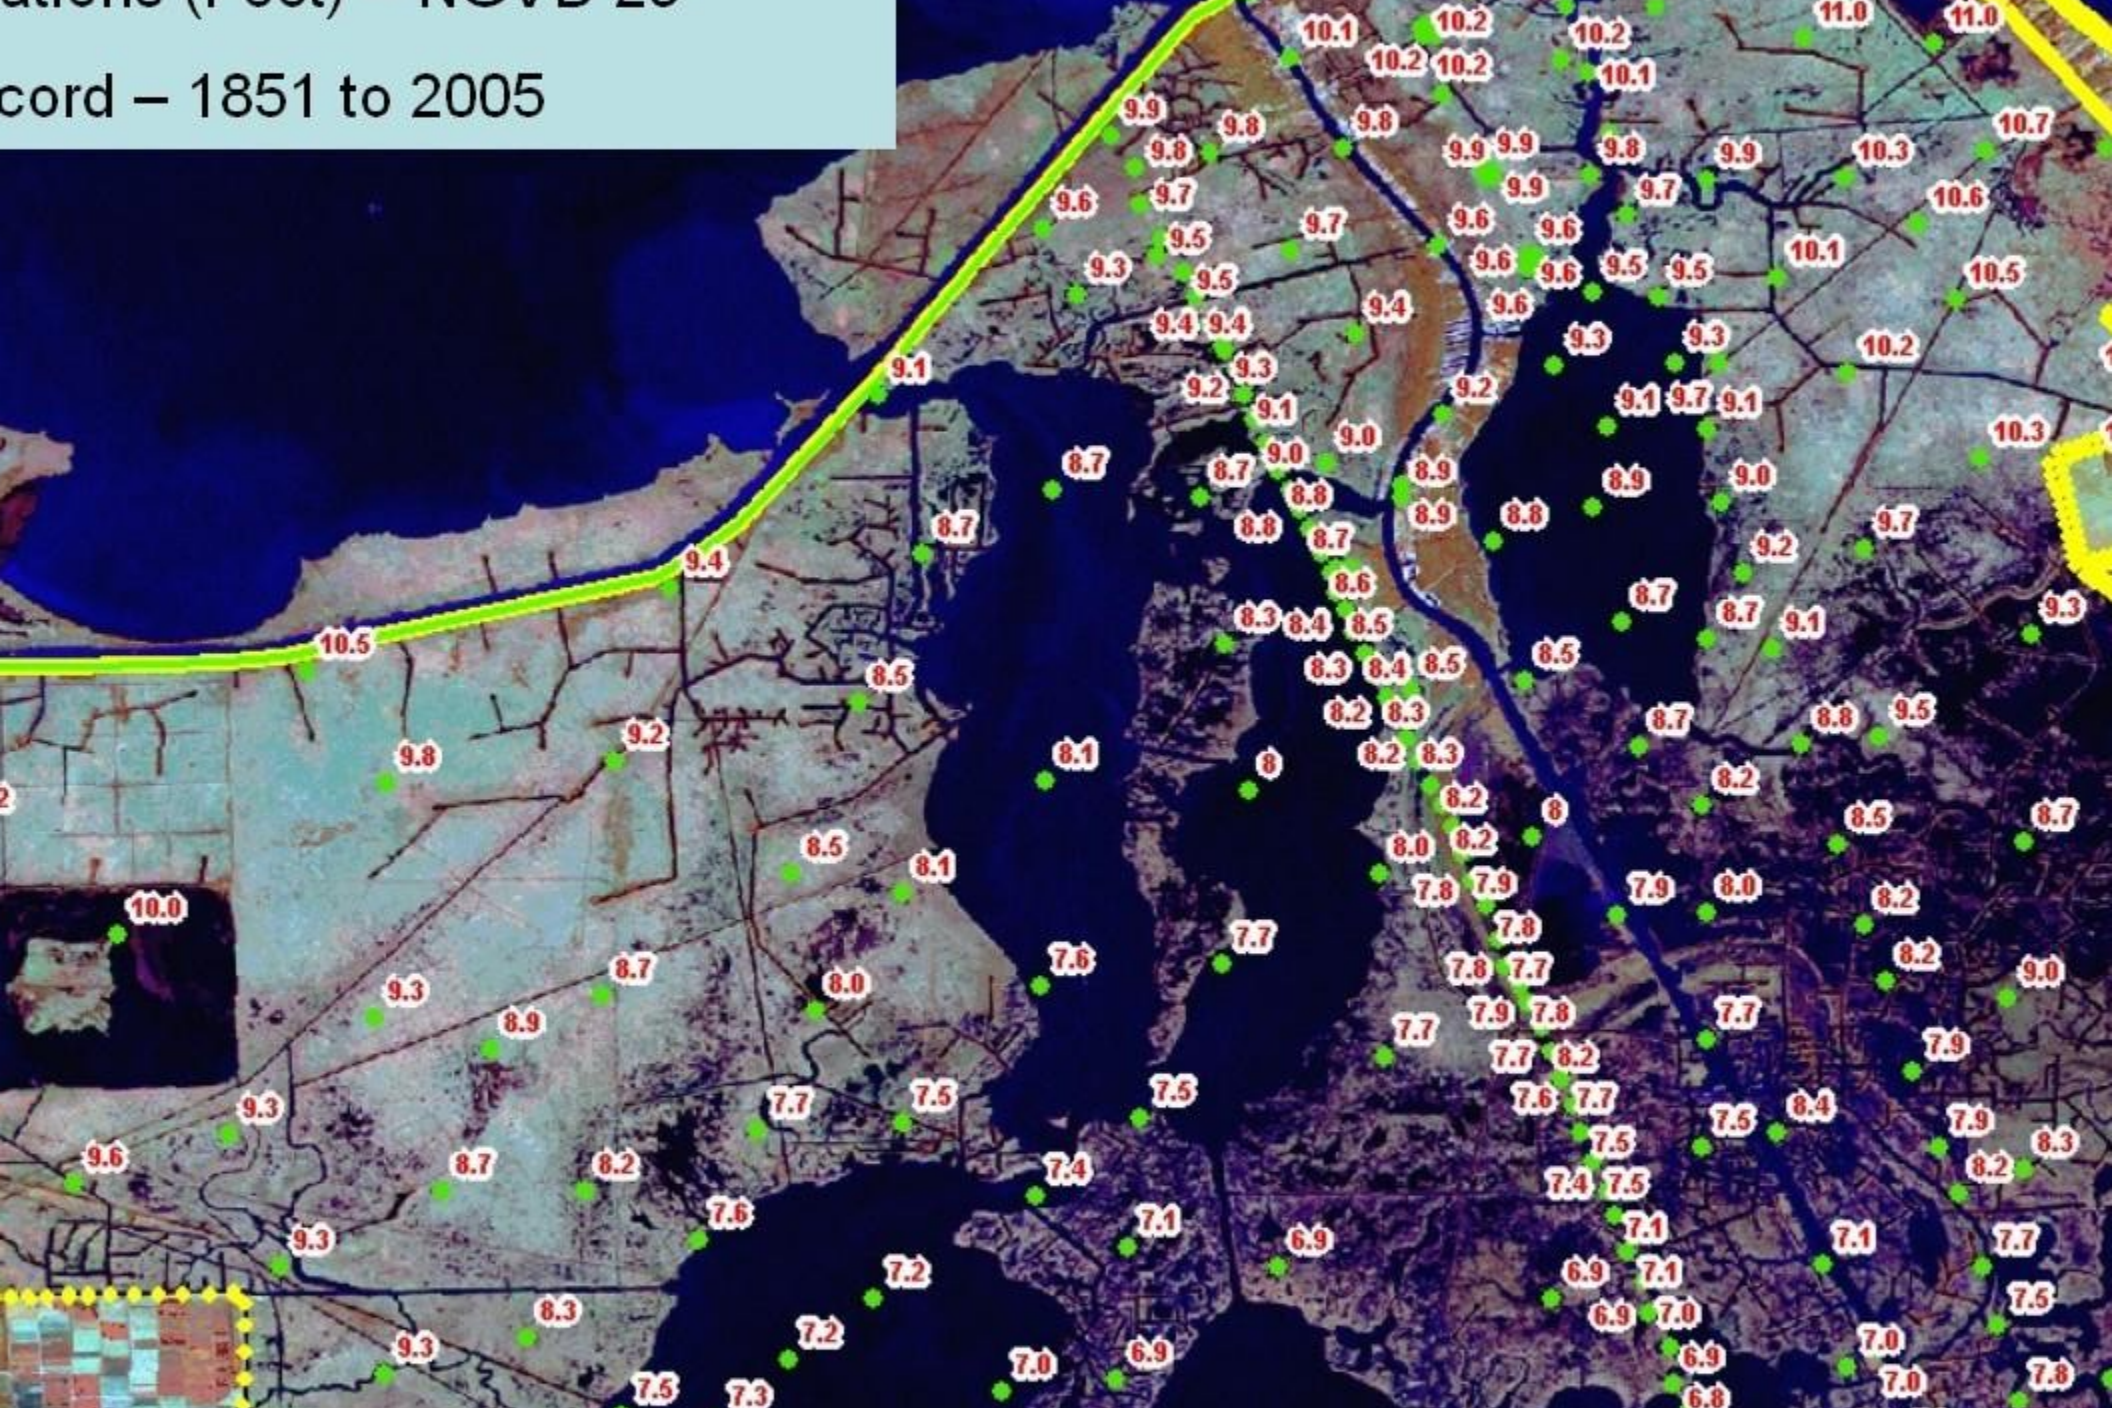
- Protection for the population and industries in the west bank of Miss. River up to Donaldsonville and west to Bayou Lafourche
- Shortest alignment (smaller front line for hurricane attack)
- Primary line of protection - existing levees become secondary protection.
- Provides vast storage area to collect rainfall, wave splashing, overtopping, or breach
- Reduces sharp bends, v-shapes, and pockets
- Optimum alignment for Cat 5 protection
- Fewer landowners to impact
- Waterway access to barge building materials and equipment, if required

Donaldsonville, LA to the Gulf of Mexico

Gulf Intracoastal Waterway (GIWW) Levee Alignment

Disadvantages:

- Will require higher levee, since it is closest alignment to Gulf
- Wider levees may be required in areas of weak foundation



ations (Feet) – NGVD 29
cord – 1851 to 2005
